Our Planet: Change is Possible, was written by the MySpace community, who discussed our Earth's present conditions and the effects of our actions in the future. From fun facts to personal stories, this book offers much advice in ways to improve our environment. A lot of creative alternatives are presented, as well as a list of toxic ingredients and tips. For example, the book tells the reader to wrap their gifts in newspaper, as most wrapping papers are non-recyclable, and encourage the usage of real plates as opposed to paper plates. The book shows that all of humankind has the power to make a difference in the world's well-being, starting from the little changes that we make in our homes.

Our Planet: Change is Possible is very realistic and practical; it is one of those typical bathroom reader books with random and fun facts that can keep the reader entertained for a few minutes. However, it is not meant to be a continuous book that one would read for two hours at a time; that being the case, buying the book, as opposed to borrowing from the library, would be the best choice in order to take the time read little by little. It gives the reader hope, knowing that the many users of MySpace truly care and all together, a difference is possible. The recommended audience for this book is ages 8 and older for the sake of the difficulty, but the content is great for all ages.
