*Super Freakonomics* is a book that makes the world feel upside down. The economist Steven Levitt uncovers the hidden parts of society and explains it using knowledge as well as humor. As a review on the back of the book says, "...has you laughing one second and then gaping in awe". This could not be more true. Levitt rips apart common knowledge to fill us with the other side of things that make you look at the world differently. When you read this book you start out thinking, "That can't be true", but by the end of the section, your mind will be blown. There are a lot of interesting topics that make this book a must read for anyone.

I would recommend *Super Freakonomics* to anyone who wants to get their mind blown. It's a book you can pick up from any section, some short and some long. These individual sections will keep you thinking for a long time and help you understand how the world works.
