

1988: Tunis, Tunisia

July 17, unspecified hour of the night

Source: UFOinfo.com web site

Computer simulation of the object seen, made by the witness

On July 17th 1988, I was lying on the terrace with my brother and cousin watching the stars and talking. All of a sudden my brother tells us to look at the plane lights coming from afar. They looked strange because we were used to a flashing light coming from planes. Anyway, we kept looking at it until something hit us; there were three disks of orange light forming a triangle moving together (afterward we knew it was part of one huge saucer like shape). The three lights were getting closer. We started to freak out a little because the lights were getting bigger but we could not see the saucer as a whole. We got up, ran and hid but still looking at the lights. The lights moved at a speed of 30 km/h when we saw them and suddenly they zipped away like a shooting star.

We could not believe our eyes and started looking at each other trying to explain what has just happened. As I was really

skeptical of everything that had to do with ufos or paranormal, I had no answer to that. However, the next day on the Italian channel in the news, they announced that the Belgian Military air force detected a UFO and 2 F16s chased it. An amateur video was shown and there were the three lights we saw.

Reliability evaluation:

- high -

**no declaration from other witnesses available;
no investigation available; possible confusion or military
craft; no certainty that the object seen by the witness was
the same seen by the Belgian Air Force**
