Argentina: CE-3 “Repeater” in La Pampa

By Quique Mario (of CEUFO)

A new and gripping CE-3 has allegedly taken place recently in the province of La Pampa, involving a woman who had a previous experience including a similar type of creature in 2007. The entity was described as very thin and tall, standing, approximately 2 meters tall. Its apparently inexpressive face had sunken eyes, a flattened nose “like an ape” and the mouth was described “as resembling a fine line”.

The new episode took place on Tuesday, October 20 shortly after 8 p.m. in a community of 1500 residents. When the witness recovered from the experience, she phoned her son, who lives a block away, and her son notified the incident to Centro de Estudios UFO (CEUFO), which immediately sent a researcher to the site. The details of the case are detailed down below and with no indication of names or exact location for preserving privacy of the people involved.

The woman was about to re-enter her home after greeting her grandson when she noticed the strange being's presence in her living room. The woman, 65, courageously and immediately thought to walk closer to her furniture with the goal of reaching for a digital camera and take a photograph of the intruder. When she turned around, the being placed one of its hands on her forearm. “At that moment I felt myself losing strength and fainting,” she said.

According to her family's estimates, the woman remained unconscious for about 15 to 20 minutes. Later she was able to call her son, who rushed over to find her mum sitting on an armchair with kinda nervous breakdown. A chair and some mechanical parts of the digital camera were on the floor.

When she sufficiently recovered from her experience, she explained: “You see, the being has appeared again,” intending the entity was the same of her previous 2007 experience. Her family immediately notified the incident to CEUFO (Centro de Estudios UFO), which arrived at the site an hour later for ascertaining that [the entity] really left strange marks on the woman’s forearm.

A small dog (Caniche), the woman’s only permanent company, was hid under an armchair, in evident and considerable fright.

The marks on the woman’s forearm changed color and visual aspect as the hours went by. The next day, the largest mark had developed into a considerable blister and, at 11:00 a.m., the woman reported that the strange being appeared once again. This time he looked at her arm and burst the blister, which produced an abundant quantity of viscous, yellowish fluid. Her relatives corroborated this particular thing.

As hours went by, the marks took various different shapes until the woman woke up in the early hours of Sunday, October 25, experiencing sharp pains. She called once again her son and other relatives; they all noted that very bright “metal filings” were duly visible. They took some pics of the forearm and collected samples of the skin, which were submitted to CEUFO for analysis.

Outcome

The marks required treatment by medical professionals, and CEUFO advisors checked in the case to analyze the samples. Further attention was given to the woman and the incident was compared with her previous experience, back in November 2007.

Entity Descriptions

As stated earlier, the odd being was nearly 2 meters tall. He was very slender but very strong, as the witness claimed “losing her strength” when the creature put his hand on her. With regard to his features, she said that his eyes “appeared sunken into its face”, but that they emanate a sensation of “tenderness”. The nose was described as ape-like and the mouth as “a thin line” while his skin was greenish or dark grey, and with folds that give the impression of “wrinkles”. When asked about the number of his fingers, she told she had the “sensation” he had five fingers.

(Re-translated from a translation (c-2009) by S. Corrales, IHU. Special thanks to Quique Mario, CEUFO and Guillermo Giménez, Planeta UFO).

VALUATION:

Very, very low credibility, due to inconsistency in many points. Witnesses reporting repeated experiences, give birth to many doubts about the truthfulness of their claims. No evidence of samples analyses.
