One of the pictures took by Mr Nagora

Mr Rudi Nagora is a sax player

On May 23, 1971 at about 12:30 pm, one of the most convincing photographs of a UFO was taken by Rudi Nagora, a Munich musician. Nagora, along with his wife, was vacationing near St. Lorenzen, Styria, Austria.

After finding a suitable place to park his car, Nagora left his wife inside the vehicle and scouted the general area before walking around with his wife.

Suddenly, he heard a “whizzing” sound coming from above. Looking up, he could clearly see a shining, silver disc which was between him and the clouds.

The object was zigzagging around. He ran back to his car, told his wife what he had seen, and grabbed his camera.

Pointing his Agfa-Click camera at the object, he took a full roll of 12 exposures, capturing several stunning images. Nagora could see the object come even closer, and then shoot straight up, disappearing through the clouds.

Everything lasted approximately 5 minute and Nagora took his film back to Munich.

UFOs researcher engineer Adolf Geigenthaler heard about the photographs, and began his investigation. After careful examination, Nagora’s photos were considered valid and legitimate by several reliable experts.

The photos have never been debunked and still considered as good pictures of a real UFO.

**Reliability evaluation:
medium**

**possible model; one witness only;
no corroborating interview of his wife available**
