

2005: Dhaka, Bangladesh

April 12, partially cloudy mid morning
Source: e-mail of the pilot, sent some months later

Frame of the bright luminosity (right) seen by the pilot

“Hi, I discovered these pictures taken on April 12, 2005, over Bangladesh, during a training flight. The altitude was 12,000 feet. I spotted that little bright spot in picture img 0123.JPG, low in front of the engine. I joined two other pictures to show the haze. And I doubt the bright spot could be a reflection from the ground because of the thick haze of that region of the world. You compare pictures: same altitude, same region, same day. I doubt more than usual because I had numerous sightings in that time frame and place along with fellow pilots. In fact in 3 months, we counted 6 sightings of bright orbs, mostly at night. One was sighted by 12 people at same time, for a full minute. Many of us were “speechless” pilots. I think you should pinpoint Bangladesh as a UFO hot-spot.”

Reliability evaluation:
very high
light of unknown origin
