Zoomed picture allowing to spot the UFO

Alien sightings (like in UFO) in Costa Rica are not new. One of the more recent is this year, an eye-witness reported and photographed of a saucer-shaped UFO near the Irazú volcano,

according to the world's oldest and largest UFO phenomenon investigative body, Mutual UFO Network (MUFON).

It was at 11:06 am on February 24, 2016 that the UFO sighting was made outside the Irazú national park. The weather was good, lots of sunlight and no clouds. "This volcano is 3,400 meters of altitude above sea level (11,260 feet) close to the biosphere, so we were above the clouds," the witness stated. "Like when you fly on an airplane, the sky was really clear so at 11 am on that altitude part of the sky was light black."

Ufosightingsdailycom's report of the same sighting said, "This UFO was seen over a Irazu Volcano in Costa Rica this week. It was probably exiting from an underground base that is 4-5 km below the volcano. Aliens often chose high peaks and volcano to make a base below, because of their security and difficulty for humans to explore. Thus, the risk of them being seen is low."
