

Section 1: Introduction to matrices

Exercise level 1

1. This diagram shows a map of the roads linking 3 towns A, B and C. The corresponding 'direct route' matrix is shown beside it.

$$\begin{matrix} & \begin{matrix} A & B & C \end{matrix} \\ \begin{matrix} A \\ B \\ C \end{matrix} & \begin{bmatrix} 0 & 1 & 2 \\ 1 & 0 & 1 \\ 2 & 1 & 0 \end{bmatrix} \end{matrix}$$

For each of the following diagrams construct the *direct route* matrix.

2. A café sells 3 main meals A, B, and C each day. On two days the sales of each type are shown in the matrix below.

$$\begin{matrix} & \begin{matrix} M & T \end{matrix} \\ \begin{matrix} A \\ B \\ C \end{matrix} & \begin{bmatrix} 4 & 6 \\ 3 & 5 \\ 7 & 2 \end{bmatrix} \end{matrix}$$

If meal A costs £4, meal B costs £5 and meal C costs £3 construct a matrix showing the amount taken for each of the meals on each of the two days.

Hence state the total amount taken for each meal over the two days.

3. $\mathbf{A} = \begin{pmatrix} 2 & -3 \\ -1 & 5 \end{pmatrix}$ $\mathbf{B} = \begin{pmatrix} -3 & -1 \\ 2 & 7 \end{pmatrix}$ $\mathbf{C} = \begin{pmatrix} 2 & 3 & -4 \\ -1 & 2 & 5 \end{pmatrix}$ $\mathbf{D} = \begin{pmatrix} -1 & -4 & 2 \\ -3 & 5 & 6 \end{pmatrix}$

Calculate, if possible,

(i) $\mathbf{A} + 2\mathbf{B}$ (ii) $\mathbf{C} - \mathbf{D}$ (iii) $3\mathbf{A} - 2\mathbf{C}$ (iv) $3\mathbf{D} - \mathbf{C}$

4. $\mathbf{A} = \begin{pmatrix} 2 & 1 \\ -3 & 4 \end{pmatrix}$ $\mathbf{B} = \begin{pmatrix} -1 & 3 & 2 \\ 5 & 1 & -2 \end{pmatrix}$ $\mathbf{C} = \begin{pmatrix} 3 & -1 \\ 1 & 2 \end{pmatrix}$ $\mathbf{D} = \begin{pmatrix} 4 & -1 \\ 2 & 5 \\ -3 & 1 \end{pmatrix}$

Calculate, if possible, the following

(i) \mathbf{AB} (ii) \mathbf{AC} (iii) \mathbf{BC} (iv) \mathbf{BD}

5. The matrices \mathbf{A} and \mathbf{B} are defined by

$$\mathbf{A} = \begin{pmatrix} 2 & 3 \\ 3 & 2 \end{pmatrix} \quad \mathbf{B} = \begin{pmatrix} 0 & 3 \\ 3 & 0 \end{pmatrix}$$

Edexcel AS FM Matrices 1 Exercise

(i) Calculate

(a) $\mathbf{A} + \mathbf{B}$

(b) \mathbf{AB}

(ii) Show that $\mathbf{A} + \mathbf{B} - \mathbf{AB} = m\mathbf{I}$, where m is an integer and \mathbf{I} is the 2×2 identity matrix.

6. The matrices \mathbf{A} , \mathbf{B} and \mathbf{C} are given by $\mathbf{A} = \begin{pmatrix} 1 & 4 \end{pmatrix}$, $\mathbf{B} = \begin{pmatrix} -3 \\ 2 \end{pmatrix}$ and $\mathbf{C} = \begin{pmatrix} 2 & -1 \end{pmatrix}$

Find (i) $2\mathbf{A} + \mathbf{C}$

(ii) \mathbf{AB}

(iii) \mathbf{BC}

7. If $\mathbf{A} = \begin{pmatrix} 3 & 1 \\ x & 2 \end{pmatrix}$ and $\mathbf{B} = \begin{pmatrix} 6 & 2 \\ 4 & y \end{pmatrix}$ find the values of x and y given that $\mathbf{AB} = \mathbf{BA}$.

8. $\mathbf{M} = \begin{pmatrix} 1 & 2 \\ 0 & 1 \end{pmatrix}$ and $\mathbf{N} = \begin{pmatrix} 2 & -2 \\ -1 & 3 \end{pmatrix}$.

Find $\mathbf{M}^2 - \mathbf{N}^2$ and $(\mathbf{M} + \mathbf{N})(\mathbf{M} - \mathbf{N})$ and explain why your results are not equal.
