## Edexcel A level Maths Sequences and series

Section 1: Definitions and notation

## Solutions to Exercise level 3

1. (i) scheme $A$ is an arithmetic sequence, with $a=20$ and $d=4$. scheme $B$ is a geometric sequence, with $a=20$ and $r=1.12$
(ii)

|  | scheme A |  | scheme B |  |
| :---: | ---: | ---: | ---: | ---: |
| month | payment | total | payment | total |
| 1 | 20 | 20 | 20 | 20 |
| 2 | 24 | 44 | 22.40 | 42.40 |
| 3 | 28 | 72 | 25.09 | 67.49 |
| 4 | 32 | 104 | 28.10 | 95.59 |
| 5 | 36 | 140 | 31.47 | 127.06 |
|  |  |  |  |  |

(iii)

|  | scheme A |  | scheme B |  |
| :---: | ---: | ---: | ---: | ---: |
| month | payment | total | payment | total |
| 1 | 20 | 20 | 20 | 20 |
| 2 | 24 | 44 | 22.40 | 42.40 |
| 3 | 28 | 72 | 25.09 | 67.49 |
| 4 | 32 | 104 | 28.10 | 95.59 |
| 5 | 36 | 140 | 31.47 | 127.06 |
| 6 | 40 | 180 | 35.25 | 162.30 |
| 7 | 44 | 224 | 39.48 | 201.78 |
| 8 | 48 | 272 | 44.21 | 245.99 |
| 9 | 52 | 324 | 49.52 | 295.51 |
| 10 | 56 | 380 | 55.46 | 350.97 |
| 11 | 60 | 440 | 62.12 | 413.09 |
| 12 | 64 | 504 | 69.57 | 482.66 |
| 13 | 68 | 572 | 77.92 | 560.58 |
| 14 | 72 | 644 | 87.27 | 647.85 |
| 15 | 76 | 720 | 97.74 | 745.59 |
| 16 | 80 | 800 | 109.47 | 855.07 |
| 17 | 84 | 884 | 122.61 | 977.67 |
| 18 | 88 | 972 | 137.32 | 1114.99 |
| 19 | 92 | 1064 |  |  |

so scheme B pays off the debt first, in the $18^{\text {th }}$ month. while scheme $A$ pays off the debt in the $19^{\text {th }}$ month.
(iv) The total paid by both schemes in nearly equal in month 14, when $A$ has paid E644 and B has paid E647.85.

## Edexcel A level Maths Sequences 1 Exercise solutions

2. (i)

|  | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| new <br> colonies | 1 | 1 | 2 | 3 | 5 | 8 | 13 | 21 | 34 | 55 | 89 | 144 | 233 | 377 | 610 |

Potentially, there are 610 new colonies in 2015.
(ii)

|  | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| new <br> colonies | 1 | 1 | 2 | 3 | 5 | 8 | 13 | 21 | 34 | 55 | 89 | 144 | 233 | 377 | 610 |
| total <br> colonies | 1 | 2 | 4 | 7 | 12 | 20 | 33 | 54 | 88 | 143 | 232 | 376 | 609 | 986 | 1596 |

( (ií)

|  | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| new <br> colonies | 1 | 1 | 2 | 3 | 5 | 8 | 13 | 21 | 34 | 55 | 89 | 144 | 233 | 377 | 610 |
| total <br> colonies | 1 | 2 | 4 | 7 | 12 | 20 | 33 | 54 | 88 | 143 | 232 | 376 | 609 | 986 | 1596 |
| ratio <br> $y_{\mathrm{n}+1} / y_{\mathrm{n}}$ | ----- | 1 | 2 | 2 | 1.5 | 1.667 | 1.6 | 1.625 | 1.615 | 1.619 | 1.618 | 1.618 | 1.618 | 1.618 | 1.618 |

The ratio converges (quickly) to a value near 1.618
(iv) The number of live colonies in 2015 is 1596.

$$
\Rightarrow \text { No. in } 2020 \approx 1596(1.618)^{5} \approx 17698
$$

By extending the table, the number in 2015 is expected to be 17710 (but don't forget that this would be limited by the predators!)
[Both the second and third rows are examples of a Fibonacci sequence, and whatever the initial two values of the sequence it is easy to show that the ratio converges to the larger solution of $n^{2}-n-1=0$ which is $\frac{1}{2}(1+\sqrt{5})$. So the ratios in both rows 2 and 3 converge to 1.618...... Test it!
This is also known as the 'golden ratio', and ocours in many places in nature. If you are unfamiliar with it, you may like to do a web search on it!]
