

Who are the members of the Diabetes Team?

Scotland has one of the highest national rates for developing diabetes, and almost 100 young people are diagnosed with diabetes in the Greater Glasgow & Clyde area every year. We are one of the largest children's diabetes service in the United Kingdom.

Each team member is a specialist, but we work together closely, and sometimes our jobs overlap! We strive to always provide correct and consistent information, based on this guide, and in its companion, the "Food For Life" book. You may find these books and other information on our web site (www.ggc-youngdiabetes.org). If there is anything you are not certain about, please ask us.

Current members of the diabetes team staff are listed below. However, you may meet any of us at your clinic, wherever it is held. Your team will be involved in your child's care, but each person will have a team of dedicated nurses to co-ordinate this care and to provide long-term continuity.

GGC Children's Diabetes Team
