

Spring Fish Survey Update on the Iola Millpond.

On Sunday March 28th the fyke nets were pulled out of Iola Millpond. Catches over the weekend were similar to what I had reported last Friday. Most of the northern pike were finishing up with spawning. We caught about 250 northern pike over the four days of netting. I have attached a picture of a 30 inch northern pike as well as a 21.5 inch brown trout. We are planning to do an electrofishing survey later in spring (probably around mid-May) to collect additional data on the panfish and largemouth bass populations in Iola Millpond.

Thanks,

Jason Breeggemann
