Name: _____

Draw your own grids/boxes to work these problems:

1. Ruby has made 76 pizzas for school lunch. If she cuts each one into 6 pieces, will there be enough pizza for all 453 Franklin students to get a piece?

2. Ruby is also making 56 apple pies. If she needs 8 apples for each pie, how many apples will she need altogether?

3. Ruby orders 4 bushels of apples for her pies. If each bushel contains 126 apples, how many *left-over* apples will she have?

How many additional pies can she make with the extra apples?
