Proton Pass

Keep your passwords and identity secure

https://proton.me/pass

What is a password manager?

A password manager is an app that stores all your logins and passwords, making it easier and faster to access your accounts online. With a password manager, you don't need to memorize multiple passwords or write them down. It encrypts your information so that only you can access it and helps you create strong, unique passwords to protect against online threats.

Is Proton Pass secure?

Proton Pass uses end-to-end encryption to protect your passwords and other sensitive information, meaning only you can access your data. Plus, it regularly undergoes independent audits, and it's open source, allowing anyone to inspect the code.

Does Proton Pass have an app for my device or an extension for my browser?

Proton Pass is available across multiple platforms, including Windows, macOS, Linux, iOS, and Android. It also provides browser extensions for Firefox, Chrome, Brave and Edge. You can securely access your passwords and sync your data across all other supported platforms.

I already use another password manager. How can I easily switch to Proton Pass?

In your current password manager, look for an export option (typically under settings) and select a format (usually CSV). In Proton Pass, select the import option from your account settings, choose your old password manager or generic CSV, and add the file to import your passwords and other data.

What makes Proton Pass different?

Built by the same team behind Proton Mail, the world's largest end-to-end encrypted email service, Proton Pass shares the mission of creating an internet where privacy is the default.

We're a community-driven company based in Switzerland and primarily owned by a non-profit foundation that makes sure we remain focused on our users. All Proton apps are open source and independently audited, so anyone can verify our security model.

Import and export passwords

To transfer your Google Chrome passwords to Proton Pass, you'll first need to download them from the Chrome browser to your device. Then you'll be able to upload your passwords to Proton Pass.

How to export your Google Chrome passwords

1. Open your Chrome browser and select your profile picture in the top right corner of the page.

2. Select **Passwords and autofill**.

3. Select **Google Password Manager**.

4. Select **Settings**.

5. Go to **Export passwords** and select **Download file**.

This will download your Chrome passwords as a .csv file.

How to import your passwords to the Proton Pass browser extension

1. Open the Proton Pass browser extension and select ☰ → **Settings**.

2. Go to the **Import** taband select **Chrome** from the dropdown **Provider** list.

3. Upload your files. You can do this by dragging your .csv export to the **File** box, or by clicking **Choose a file or drag it here** to upload the file from your device. Click **Import** when you're done.

General   Security   **Import**   Export

In order to migrate your data to Proton Pass from another password manager, export your passwords from your current provider and import them using the form below. Once all your items have been imported, delete the previously exported file.
