

Available Light

Available light is described as Photography in low light situations using only the light around you

Available light relies on natural light which allows you as the photographer to take Casual shots when you go for your daily walk in the park

Preexisting light is available at the time you arrive at the site for your photoshoot

You will need to adjust the film speed, the shutter speed and the aperture settings

The advancement of the digital camera make the art of Available light photography much more effective as you can select different film speeds at the touch of a button

By using reflectors you can direct the light to highlight a specific area and reduce unwanted shadows.

Casual and Action Photography use available light As not to cause a distraction to the athletic Participating in the sport distracting the Guests attending a Party Or Offset the mood of the event buy having the flash go off

The key factor of using available light Is to get the colours correct as each light source produces it's own colour shade With the digital camera you can set the Automatic white balance
