www.mathizaverb.com

The course is an AP designated course and is similar to an Intro to Computer Science course at most colleges and universities.

The [link](#) will take you to all course materials, Snap! , and AP related materials which are at my website.

You should have all received an invite as parents to my Google classroom. Your child also needs to join the AP Classroom where all AP exam information is distributed and where the Digital Portfolio resides.

The course is made up of 5 BIG Ideas of Computing: **Creative Development**, **Data**, **Algorithms and Programming**, **Computer Systems and Networks**, **Impact of Computing**. This [link](#) will direct you to more detailed information provided by CollegeBoard regarding the why, the how and the what.

The course is heavily lab based and will focus on tasks to prepare students for success. The course is highly collaborative and provides opportunity to think creatively and critically.

Our final AP exam has two components: A CREATE task due by April 30th at 11:59 pm and a multiple choice exam on May 13th.

Grades are based on categories of Labs/HW 40% and Assessments of 60%.

Please feel free to contact me with any questions you may have - email is best.
