

Name _____ Date _____

Dynabold

Most European financial institutions agree that an ATM is not just a purchase, it is an investment. That is why more than 50 percent of banks that have ATMs have invested in ours.

At Dynabold we have always built our ATMs to last. Since we are continually developing new technologies, we have made them adaptable, too. Years ago we created the industry's first modular ATM that could be upgraded without changing the housing. Today these ATMs are still yielding dividends for their original investors.

However, we do much more than protect your investment. With more than 100 years of security expertise, we make sure your ATM is secure, too. Our service organization responds 24 hours a day, 365 days a year. Also, all our service engineers are trained to maintain everything from electronic components to security features.

It is no wonder that the majority of European financial institutions use our ATMs. They know their money is securely invested. Shouldn't you invest your money wisely, too? Call Dynabold today to find out how. We will arrange to send a Dynabold representative to visit you at your place of business to discuss our complete line of products and show you how a Dynabold ATM system can save you valuable time and money in ways that other ATM systems cannot.

Various maintenance and upgrade packages are available. Our representative will help you select the best system and packages to serve your needs. Call today.
